

# How to use this Paging tool

## 1. IP Phone receive broadcast---settings

### 1) Normal IP phones

### 2) IP Speaker-PS760

## 2. Paging tool settings—Multicast Streamer

PS: This tool is used to test free, you can also use other tools to do paging.

Our phone only support G711A(alaw) stream at present.

### 1) Run the software in the PC, Paging tool & sample music download link

[https://voip.world/mediafiles/download/telephone\\_systems/escene/software/Paging-Multicast-Streamer/Paging-MulticastStreamer.rar](https://voip.world/mediafiles/download/telephone_systems/escene/software/Paging-Multicast-Streamer/Paging-MulticastStreamer.rar)

2) Input the destination IP address, and choose the correct sound device. Then click "start" to begin.

3) Extended feature, use to Broadcast the audio file, it only supports \*.wav, please note.

PS: this tool only support the music that Samples per Second=8000
